

Manufacture more for less.

sales@salespad.com 616-245-1221

EASILY CONFIGURE MADE-TO-ORDER PRODUCTS.

Gone are the days of seemingly endless hours spent setting up individual configurations for made-to-order products. SalesPad Desktop's solution makes configuration a piece of cake.

ISSUE SILENT MANUFACTURING ORDERS.

By incorporating sales order workflows into your manufacturing process, manufacturing orders can be generated "silently" in the background. No extra clicks on your end.

TRACK AND VIEW REVISION HISTORY.

Root out any problems with manufacturing configurations by viewing a configuration's or manufacturing BOM's revision history. Revision histories are automatically saved.

CREATE INTERDEPENDENT RESTRICTIONS.

Interdependent restrictions allow for highly customized rules governing which options are available when. For instance, limit the color blue to only gallon-sized coolers.

SIMPLE SO-TO-MO LINKING, AND VICE VERSA.

No more viewing the sales order, taking notes, then scrambling to find the related manufacturing order. Simply click the link to jump from one to the other.

INTUITIVE BOM, MO, AND ROUTE ENTRY.

With manufacturing from SalesPad Desktop, creating bills of materials, manufacturing orders, and customized manufacturing routes is an intuitive process that simplifies your workday.

MASS UPDATING AT YOUR FINGERTIPS.

No more opening multiple entries to make the same changes one by one. Apply mass updates to manufacturing BOMs and BOM lines, routes, and route sequences.

CONDITIONAL ROUTE LINKING.

Sometimes a customized product can't be pinned down to just one manufacturing route. Conditional route linking allows you to build in options to get the job done right.

Increase efficiency, quality, and margins.

Opt out of stress in your made-to-order product

manufacturing. Configuring, assembling, and selling a made-to-order product doesn't have to be an overly complicated process. With SalesPad Desktop, manufacturing is an intuitive process that makes light work of creating made-to-order products in a timely fashion. Whether you are looking for a powerful way to configure made-to-order products or you're searching for a system that makes it easy to update components, attributes, and more, Manufacturing in SalesPad Desktop is right for you. You might even call it...the BOM.

WHY MANUFACTURING WITH SALESPAD DESKTOP?**Manufacturing with SalesPad Desktop gives you options.**

Lots of options. Don't be deceived by how easy it is to set up a manufacturing configuration; SalesPad's powerful manufacturing management capabilities can handle anything you throw at them. From seamless sales order to manufacturing order linking, to dynamic attribute updates and interdependent restrictions, to automatic revision change tracking, manufacturing in SalesPad Desktop has you well covered.

Manufacturing with SalesPad Desktop fits right in with the rest of your SalesPad ecosystem. Eliminate hassles by keeping your BOM and manufacturing processes within SalesPad, and streamline your processes further by adding in sales order workflows that trigger the creation of required manufacturing orders. Bring the simplicity of sales order processing in SalesPad Desktop to your manufacturing enterprises.

MANUFACTURING IN SALESPAD DESKTOP

- Distribution BOMs
- Assemblies
- SOP-to-Assembly linking
- Assembly Workflow plugin

MANUFACTURING EXTENDED PACK*

- Configurator for Distribution BOMs
- Configurator for Manufacturing BOMs
- Manufacturing BOMs
- Manufacturing Orders
- Routings
- Mass update for BOMs, BOM Lines, Routes, and Route Sequences
- MO workflow plugin
- MOP-to-SOP linking

**Additional cost*
